DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-20 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Roth et al, U.S. Patent No. 4,834,903.

Roth et al, U.S. Patent No. 4,834,903, discloses a detergent composition comprising an alkylene oxide adduct of glycoside surfactants (see abstract and col. 2, lines 19-22). It is further taught by Roth et al that suitable alkylene oxide adduct of glycoside surfactants include oxyalkylated long chain polyglycosides of formula B, wherein R contains 6-20 carbon atoms, G is a saccharide residue containing 5 or 6 carbon atoms, AO is an alkylene oxide residue, n is 1-30, and x is 2-2.7 (see col. 2, lines 18-48), per the requirements of the instant invention. Roth et al further discloses that the oxyalkylated glycosides are made by reacting an alkylene oxide, such as ethylene oxide, with a mixture of long chain monoglycosides and long chain polyglycosides at an elevated temperature, such as 120-170 degrees Celsius, with a base catalyst, such as sodium hydroxide (see col. 4, line 49-col. 5, line 29), and that the oxyalkylated polyglycosides are present in liquid compositions that contain 35-65% by weight of water (see col. 7, lines 51-64). Specifically, note Examples 1-3. Therefore, instant claims 1-20 are anticipated by Roth et al, U.S. Patent No. 4,834,903.

In the alternative that the above disclosure is insufficient to anticipate the above listed claims, it would have nonetheless been obvious to the skilled artisan to produce the claimed composition, as the reference teaches each of the claimed ingredients within the claimed proportions for the same utility.
